简单实现用户系统

代码运行

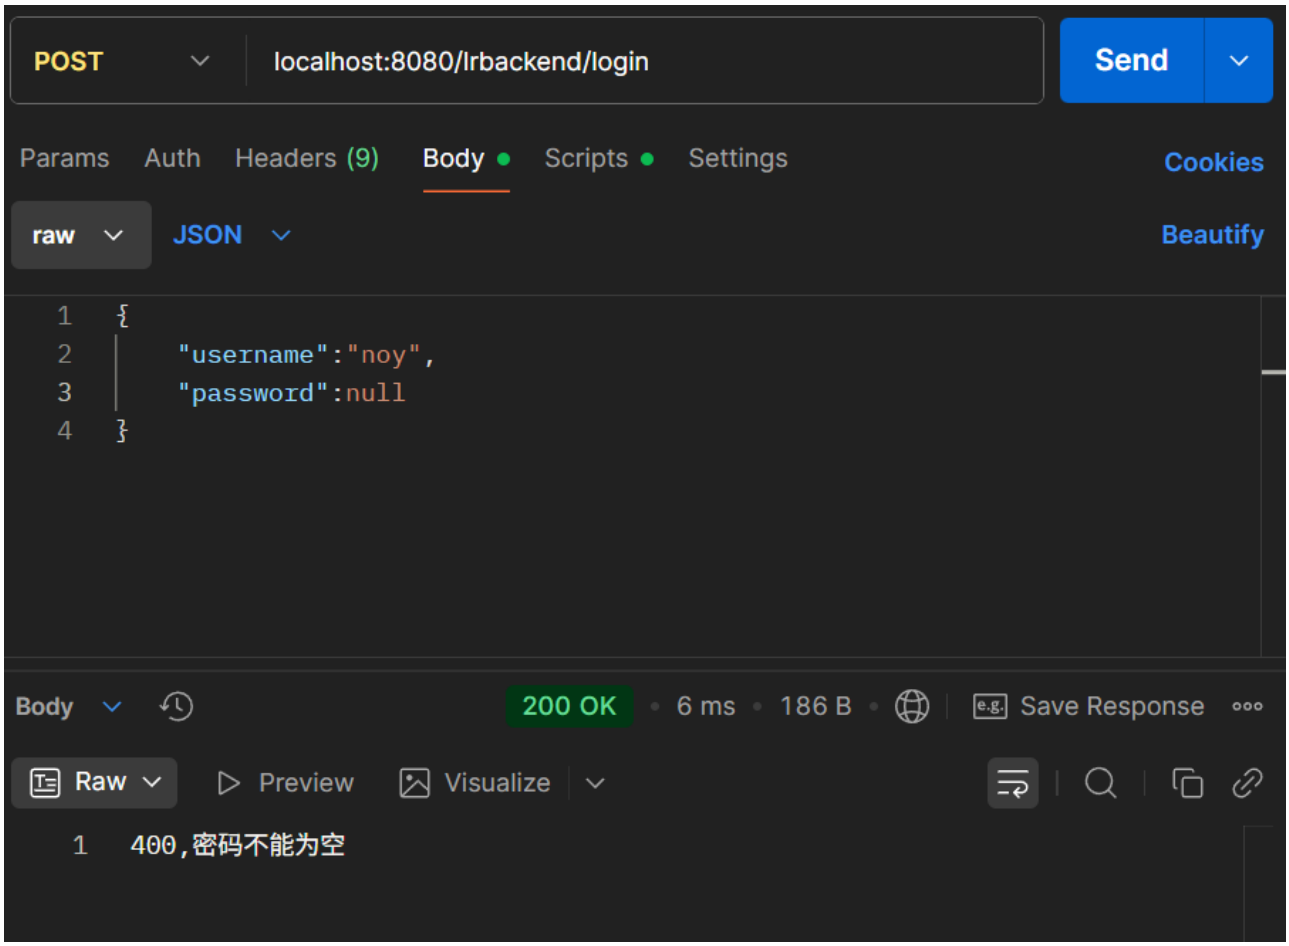

1. 注册

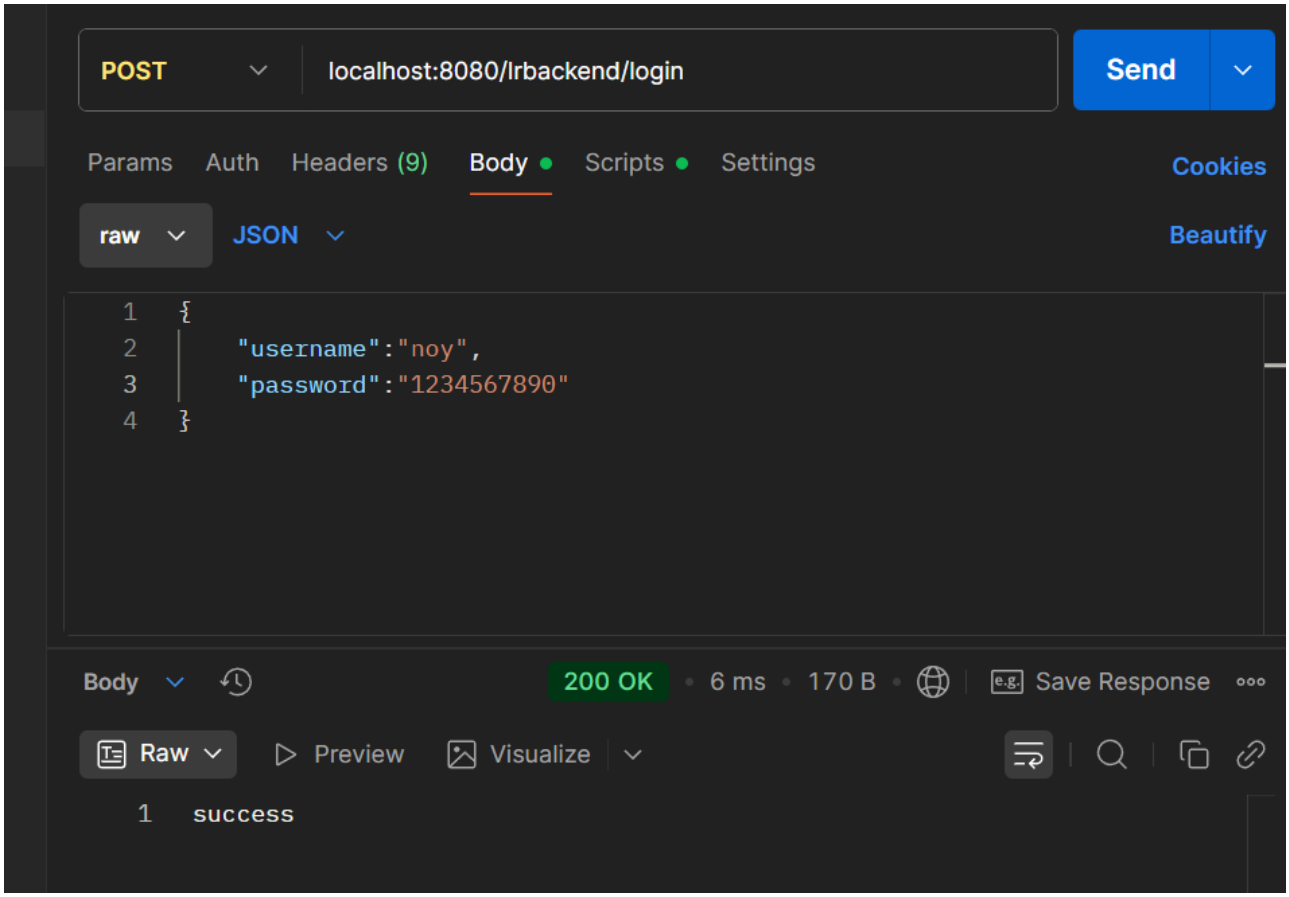

2. 用户名重复

POST
localhost:8080/lrbackend/register
Send
Params Auth Headers (9) Body Scripts Settings
Cookies
raw JSON
Beautify
{
"username":"noy",
"password":"1234567890"
}
Body
200 OK 7 ms 195 B
Save Response
Raw Preview Visualize
注册失败,用户名已存在

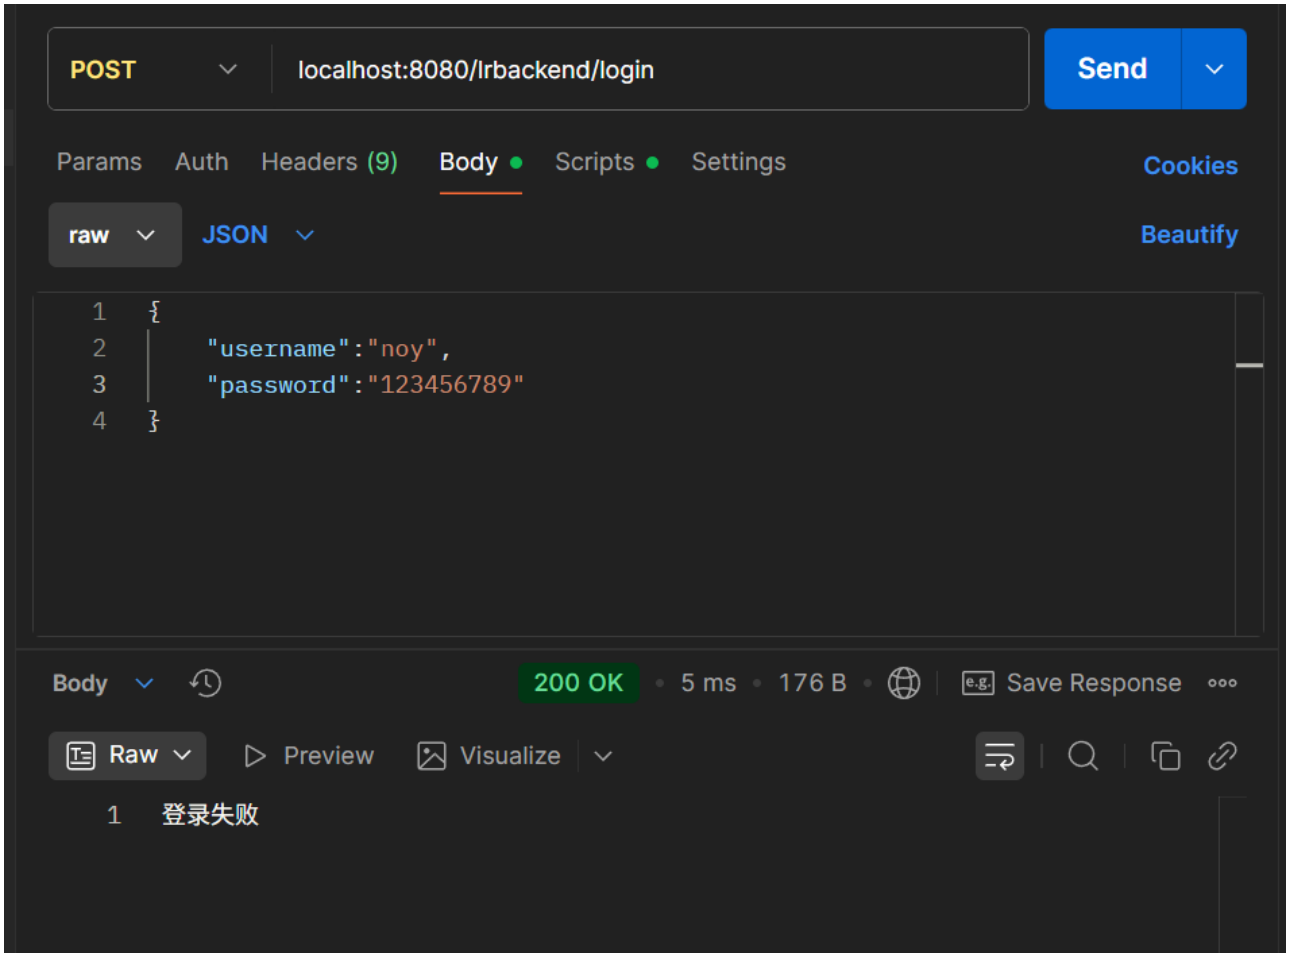

3. 空密码

POST
localhost:8080/lrbackend/login
Send
Params Auth Headers (9) Body Scripts Settings
Cookies
raw JSON
Beautify
{
"username":"noy",
"password":null
}
Body
200 OK 6 ms 186 B
Save Response
Raw Preview Visualize
400,密码不能为空

4. 登录

5. 登录失败

代码讲解

1. entity对象

```
//用户实体类
@NoArgsConstructor
@AllArgsConstructor
@Data
public class LrbackendUser {

    @NotBlank(message = "用户名不能为空")
    private String username;

    @NotBlank(message = "密码不能为空")
    private String password;
}
```

@notblank与@valid配合实现自动校验

2. controller层调用service层方法实现对数据处理
3. Util层提供加密方法,检查用户名是否重复的方法
4. 通过i/o字符流实现对txt文件的读取与写入.
